Introduction

This document will provide assistance in getting your SiteCount Software installed and configured.

Requirements

General

- Internet Access (*used to register the software*)
- Valid SiteCount Serial Number

Contact us at support@trafsys.com if you have not received a Serial Number

Software

- Operating System: Windows 2000 / XP / Server 2003 / Server 2005
- Database Server: Microsoft SQL Server 2005
(Express version Freely available)
- .NET Framework: Version 2.0
(<http://go.microsoft.com/fwlink/?LinkId=55731>)
Version 3.5
(<http://www.microsoft.com/downloads/details.aspx?FamilyID=AB99342F-5D1A-413D-8319-81DA479AB0D7>)

Hardware

- Processor: 1.0 GHz
- Memory: 512MB
- Available Disk Space: 5GB(for database growth)

Fulfilling Software Requirements

Installation of Microsoft SQL Server Express

If you require a database to be installed for your SiteCount installation it is recommended that you install Microsoft SQL 2005 Server Express. The installer can be found at <http://go.microsoft.com/fwlink/?LinkId=65212>

Requirements

In order to install the SQL 2005 Server Express on your server it is required that your operating system is updated to at least the following:

Service Pack

- Windows 2000 Service Pack 4
- Windows XP Service Pack 2
- Windows Server 2003 Service Pack 1

Microsoft .NET Framework

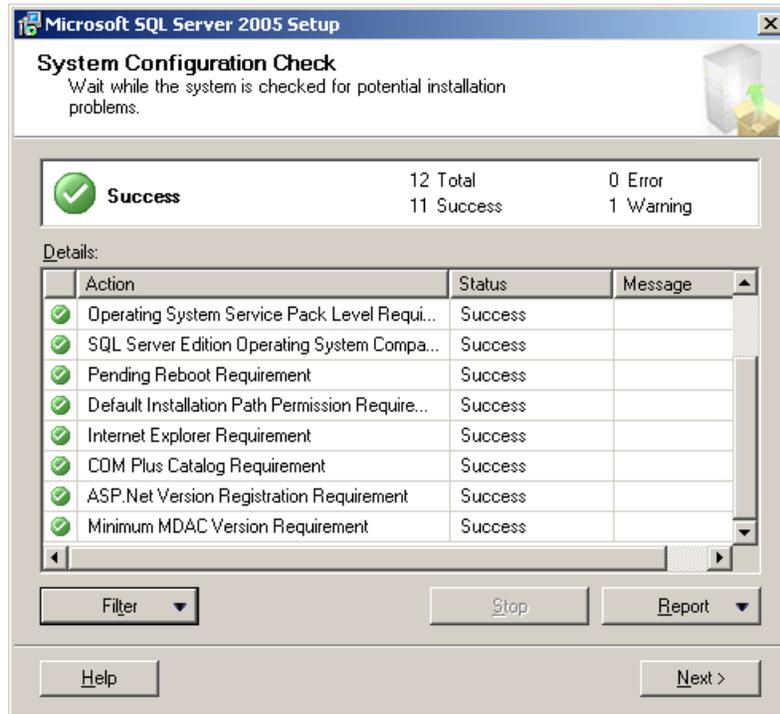

- Version 2.0 Required (<http://go.microsoft.com/fwlink/?LinkId=55731>)

Microsoft Windows Installer

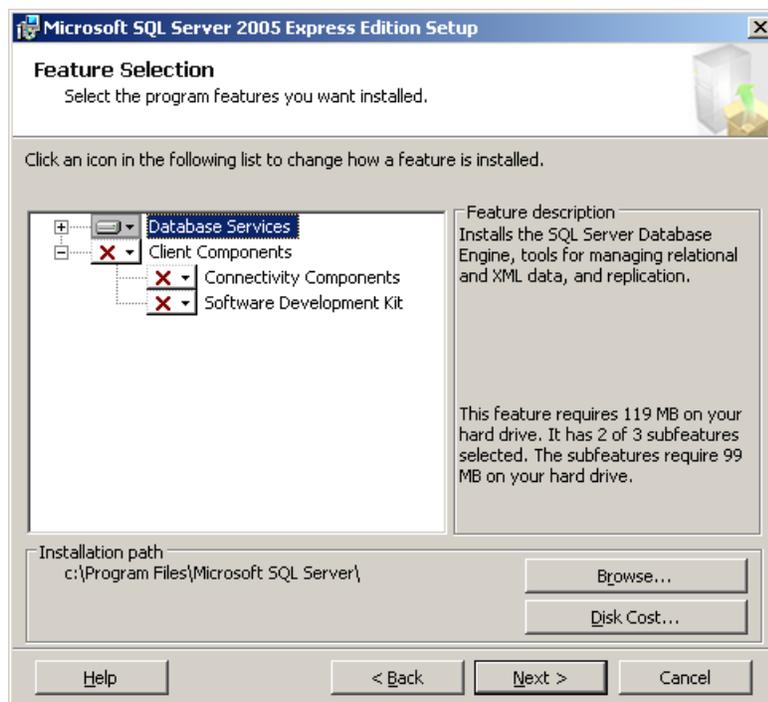

- Version 3.1 Required (<http://go.microsoft.com/fwlink/?LinkId=46459>)

Installation

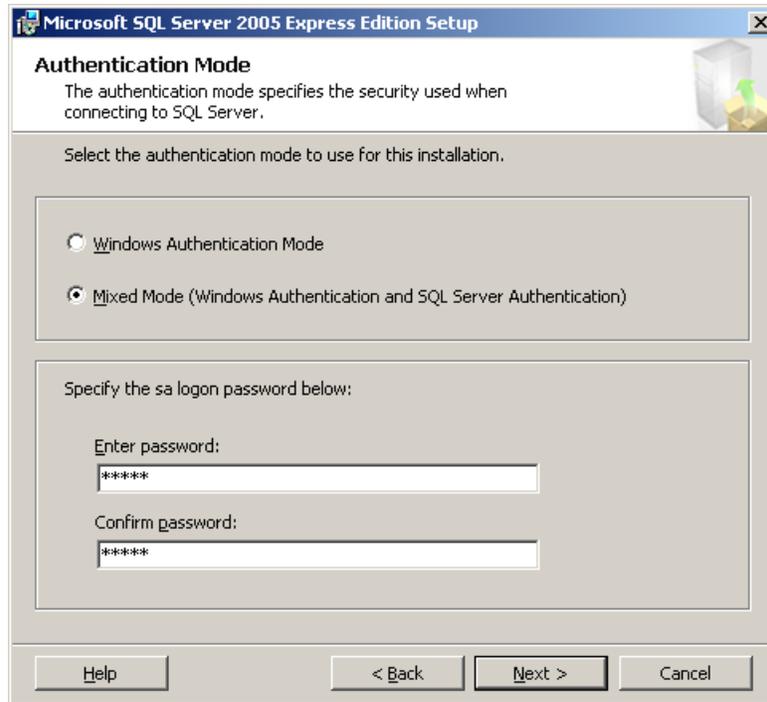

After the requirements are met you can proceed with the install. Launch the SQL 2005 Express installer and follow the on screen directions. It will take you through a **System Configuration Check** before the software is installed. Errors will need to be met for the installation to proceed.

After Choosing your Name and Company you can select the **defaults** for the **Feature Selection**. If you require the program installation path to be in a specific location choose that here on this screen.

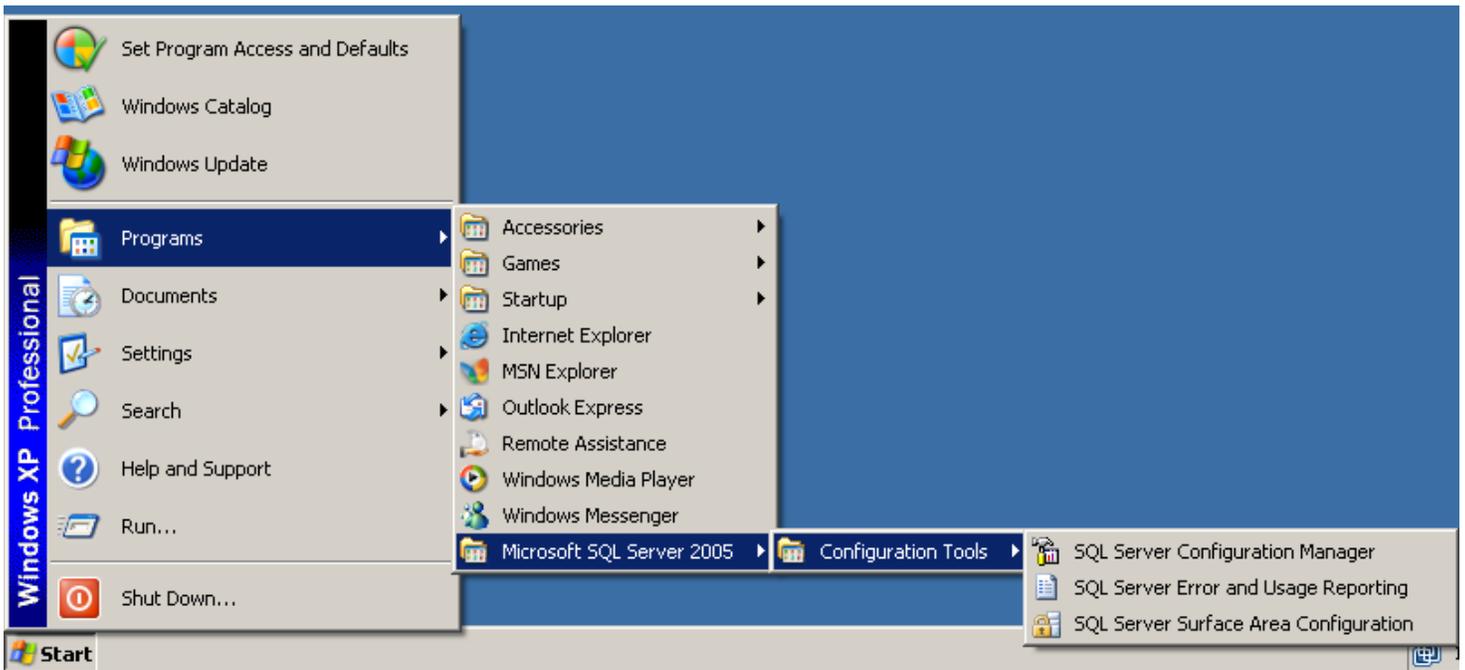

Continue along with the installer until you are prompted with the **Authentication Mode** window. Select the Mixed Mode Authentication, and specify your new **sa** password. *(This password will be used to attach the SiteCount database.)*

Afterwards continue along with the install until the process is finished.

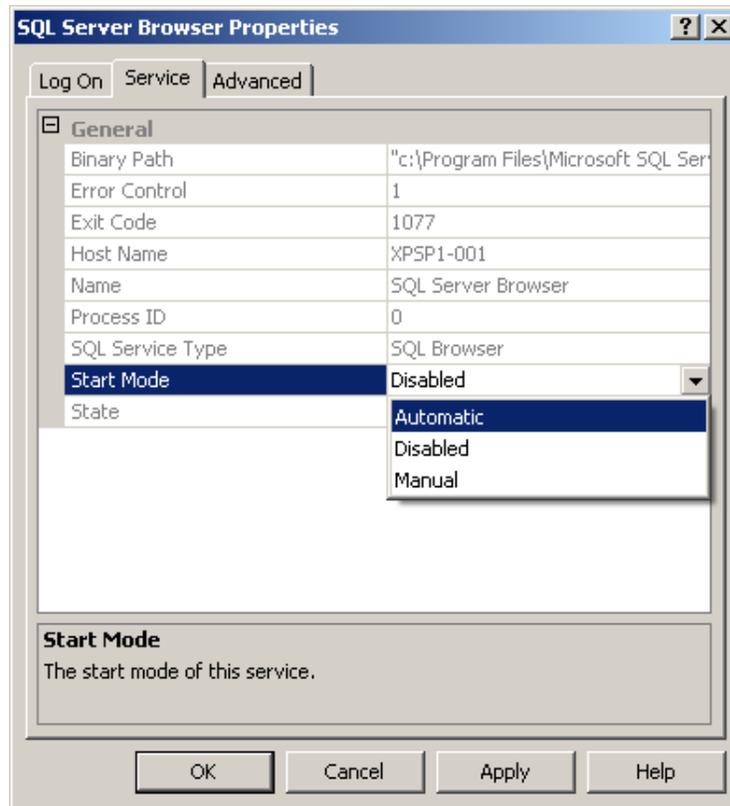

Configuring Microsoft SQL Server 2005 Express

SQL Server 2005 has a couple settings that need to be configured for the installation of SiteCount to begin. Locate the **SQL Server Configuration Manager** from the start menu.

Locate the **SQL Server Configuration Manager** from the start menu, It is needed to start the SQL Server Browser service. Select **SQL Server 2005 Services** on the left, and then double click the **SQL Server Browser** on the right. This will bring up the **SQL Server Browser Properties** window.

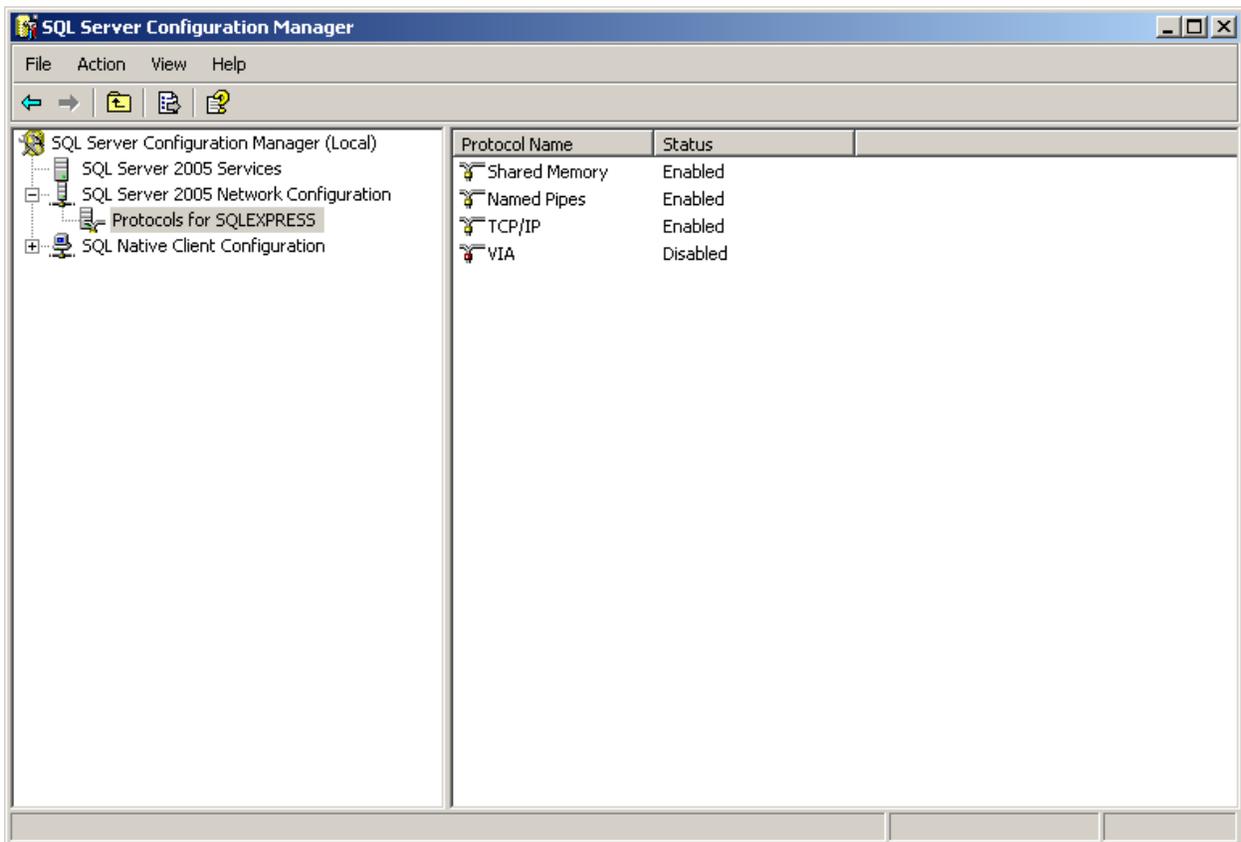

In the properties Select the **Service** tab and locate the **Start Mode** field below. Set this to **Automatic** and then **Apply** the settings below.

Once the settings are applied you can go to the **Log On** tab in the properties window. Within here at the bottom, select **Start** to start the service and **OK** to close out of the properties window.

The other settings that need to be changed in the SQL Server Configuration Manager are the **Protocols for SQLEXPRESS** located in **SQL Server 2005 Network Configuration** menu option.

Named Pipes and **TCP/IP** need to be **Enabled**

After completing these changes you can close out of the SQL Server Configuration Manager and proceed with the SiteCount Installation.

Install Database

Here we install the database to the SQL Sever that we configured.

Select the Install Database Server

Here we select the SQL Server that we want to use for SiteCount. If the server is not shown in the drop down list you can use **localhost\SQLEXPRESS** to install to the local SQL Server 2005 Express.

There are two methods to have user permissions to attach the SiteCount Database. You can use the **Windows Integrated Security** or the **SQL Server Login** (sa user that was set on Page 8)

The **SQL Server Login** is the **recommended** choice as it is set independent to the windows users permissions.

Once you have selected the SQL Server and the login permissions, select **Install Trafsys Database**. If settings are correct, you shall be prompted that it has been installed. Otherwise, refer to [Troubleshooting](#) for help.

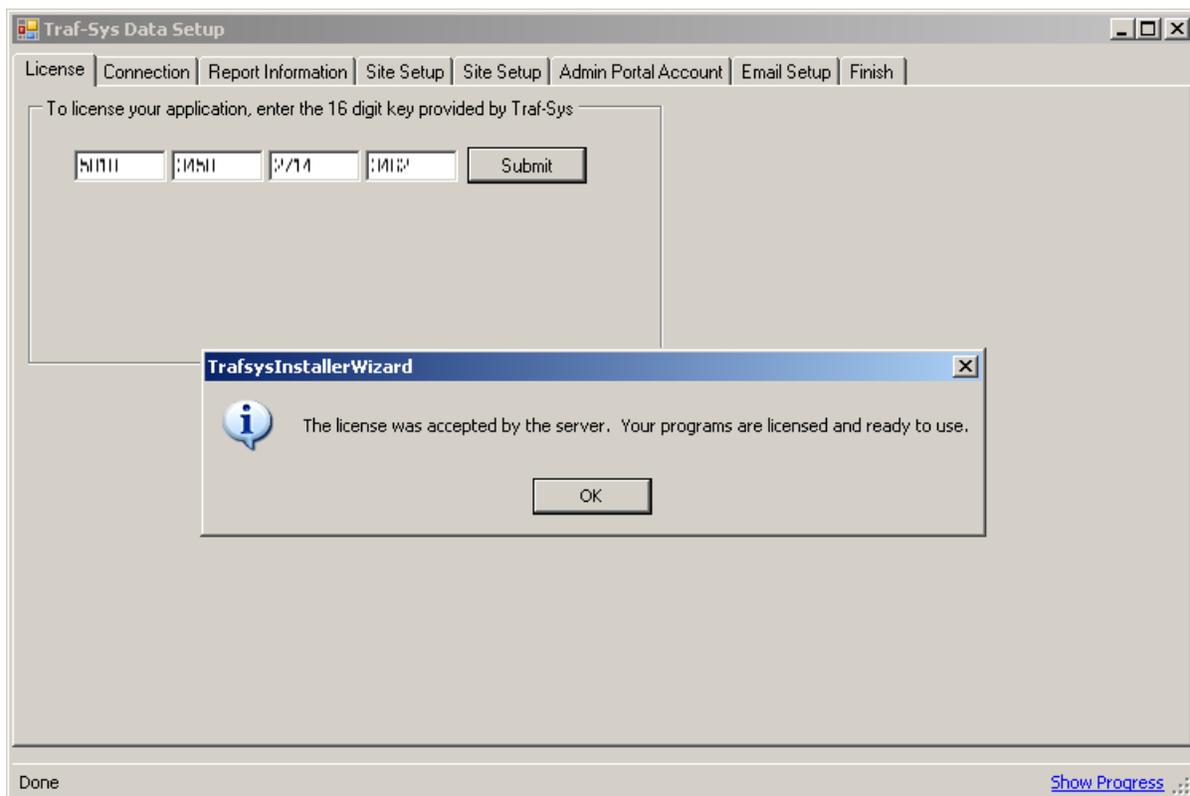

Setup Database

After the Database has been installed you will now proceed to **Setup Database**.

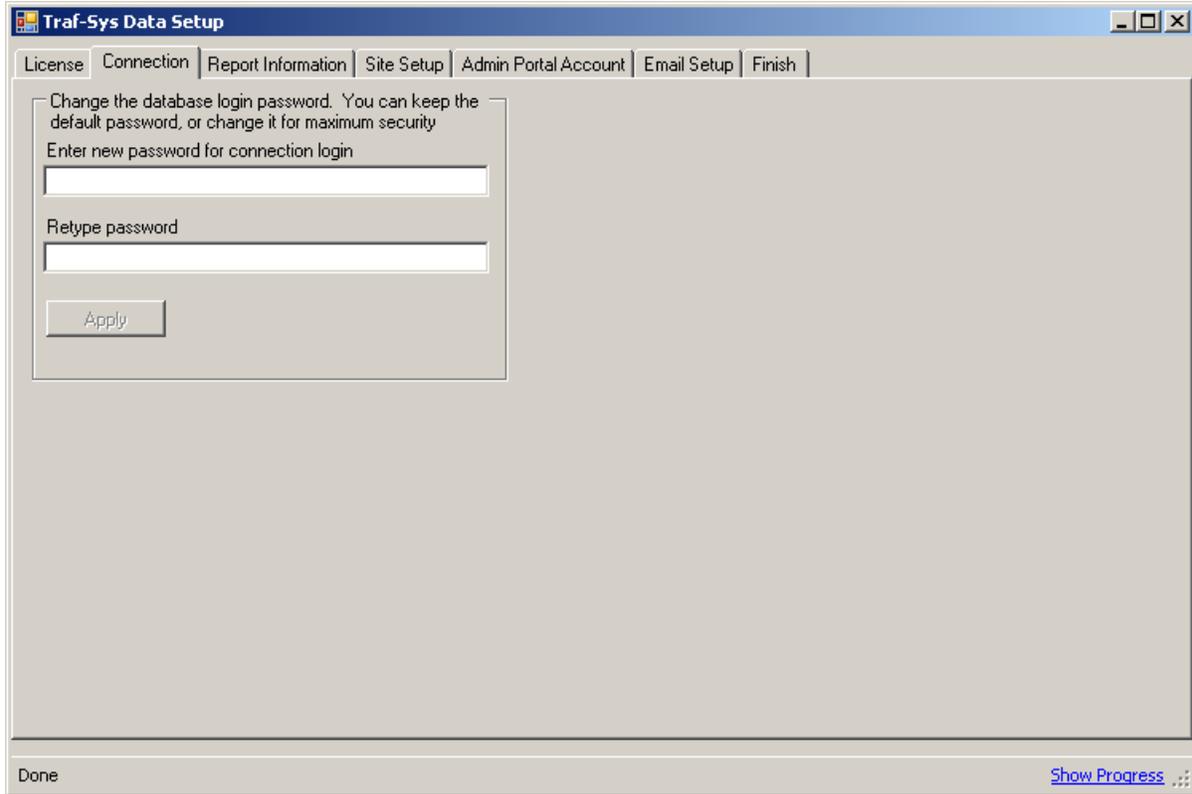

License

The first step in setting up the database is entering your SiteCount Serial Number. This portion on the installation requires that you are connected to the Internet to verify that the license is valid. You should receive the following notification on a valid License.

Connection

Here you have the option to change the default password for the database login. *Note: This step is optional and is intended for advanced settings.*

The screenshot shows a Windows-style dialog box titled "Traf-Sys Data Setup". It has a tabbed interface with the following tabs: License, Connection (selected), Report Information, Site Setup, Admin Portal Account, Email Setup, and Finish. The "Connection" tab is active and contains the following text and controls:

Change the database login password. You can keep the default password, or change it for maximum security

Enter new password for connection login

Retype password

Apply

At the bottom left of the dialog box, the word "Done" is displayed. At the bottom right, there is a blue hyperlink labeled "Show Progress" followed by a small icon of three dots.

Report Information

This section allows you to adjust some of the reporting options of the SiteCount software. The Customer Name will be set at this point along with First day for the reports.

The selection of reports on the right are predefined reports that you have the option to enable for the Report Gallery.

The Sales, Transactions, Wage and Labor options allow you to store additional information in your database that you can compare against your traffic numbers.

The screenshot shows the 'Traf-Sys Data Setup' window with the 'Report Information' tab selected. The window contains the following elements:

- Customer Name for Reports:** A text input field containing 'Test Customer'.
- First Weekday for Reports:** A dropdown menu set to 'Sunday'.
- Options:** Four checkboxes for 'Use Sales', 'Use Transactions', 'Use Wage', and 'Use Labor', all of which are currently unchecked.
- Apply Button:** A button labeled 'Apply'.
- Report Selection List:** A list of report names on the right side of the window, including 'Weekday Analysis', 'Day Part', 'Weekday by Hour', 'Occupancy', 'Layout', 'Weekday Report', 'Hourly Report', 'Hourly by Day of Week', 'Trend Ins and Outs', 'Weather/Special Events', and 'Category Weekday Analysis'. The list is currently empty.
- Buttons:** Two buttons at the bottom of the list, labeled 'All' and 'None'.
- Status Bar:** A status bar at the bottom of the window displaying 'Report information saved' and a 'Show Progress' button.

Site Setup

A site is represented as a location that has a MIU data controller. The number of Sites you set up is one or greater relative to the number of data controllers. Start by selecting **New**, then fill in the corresponding information to the right.

A **Site Name** will represent the location of where each people counting system is located. The **Site Code** is a numerical identifier used to sort a collection of **Site Names**. The **Time Zone** is used to keep the counts in the correct hourly period. The **MIU Type** is type of data controller you are setting up. The **IP Address of Polling Device** is the IP of the MIU data controller at the site.

MIU 1000

Notice the **Autosetup of Sensors Enabled** option when MIU 1000 selected

Autosetup of Sensors

When saving your settings for a MIU 1000 data controller you will be prompted with the following dialog.

If receive an error that **No Connection to MIU** referer to [Troubleshooting](#) for more help.

Locations / Sensors connects to the MIU and imports the sensor table. The **Location name** is used to signify where the sensor is located in a particular site. **Num Sensors** is used to set the number of sensors at a given location, this value will remain as 1 unless using Thermal Camera Network. The **Sensor Serial** is a unique identifier for each sensor. The **Type Sensors** is the type of sensor that is installed on the MIU. (*When using non directional wireless beams use the **Beam Closed** sensor type.*)

*It is recommended to not change the **Num Sensors** or **Sensor Serial**.*

Once the settings are entered correctly select **OK** to save the settings.

MIU 1500

The screenshot shows the 'Traf-Sys Data Setup' application window with the 'Site Setup' tab selected. The window title is 'Traf-Sys Data Setup'. The tabs are: License, Connection, Report Information, Site Setup, Admin Portal Account, Email Setup, and Finish. The main area is titled 'Enter information about the sites'. On the left, there is a list box containing 'PointManager' and 'CompuCount', with 'CompuCount' selected. Below the list box are 'New' and 'Delete' buttons. On the right, there are several input fields and dropdown menus: 'Site Name' (text box with 'CompuCount'), 'Site Code' (text box with '1500'), 'Time Zone' (dropdown menu with '(GMT-05:00) Eastern Time (US & Canada)'), and 'MIU Type' (dropdown menu with 'MIU 1500'). Below these is the 'IP Address of Polling Device' (text box with '10.118.1.59'). There is a 'Setup Sensors/Locations' button to the right of the IP address field. At the bottom right of the main area is an 'Apply' button. At the bottom right of the window is a 'Show Progress' link.

When setting up SiteCount with a MIU 1500 (CompuCount) you will enter the information just like an MIU 1000. When done select the **Done** button at the bottom.

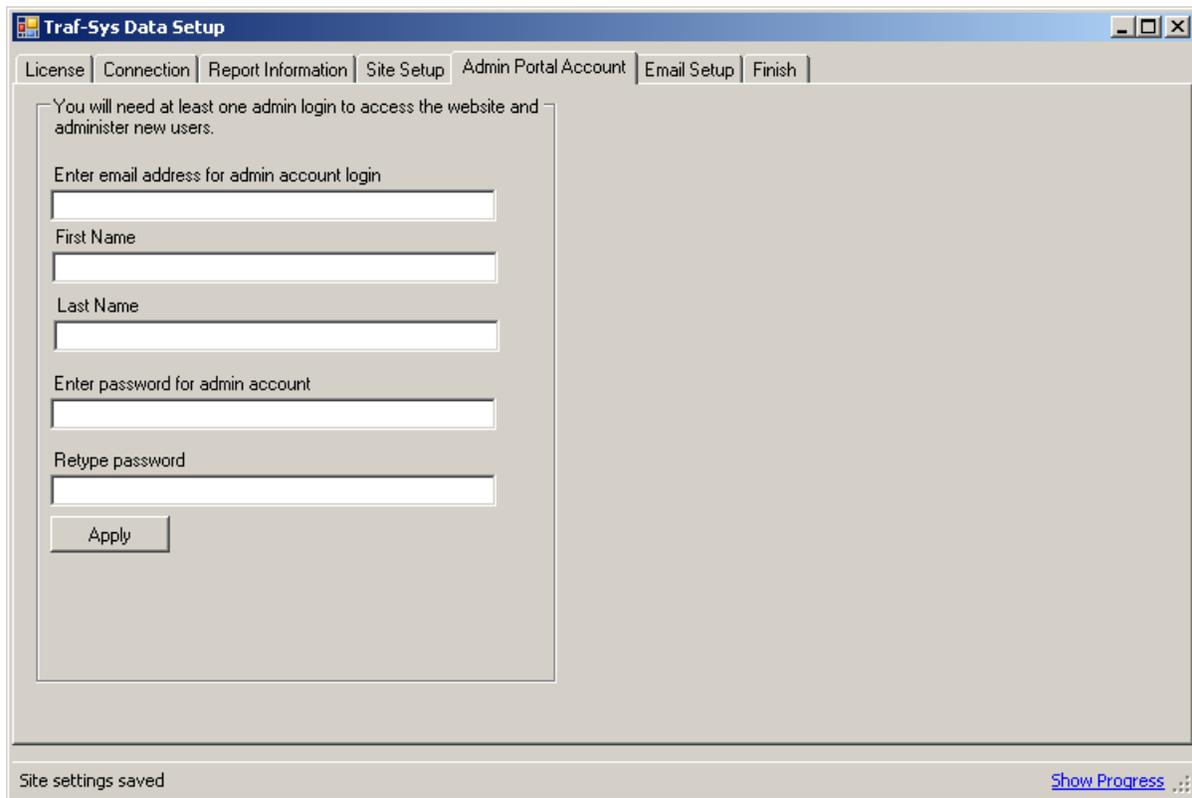

The Locations and sensors for the MIU 1500 will be entered within SiteCount's DataEntry Application.

Refer to [this section](#) for this procedure.

Continue these steps for each **Site** that you have a MIU data controller at.

Admin Portal Account

The Admin Portal Account is the first login that is created. It is from this account that you create other users and apply permissions.

The screenshot shows a window titled "Traf-Sys Data Setup" with a tabbed interface. The "Admin Portal Account" tab is selected. The window contains a message: "You will need at least one admin login to access the website and administer new users." Below this message are several input fields: "Enter email address for admin account login", "First Name", "Last Name", "Enter password for admin account", and "Retype password". An "Apply" button is located below the password fields. At the bottom of the window, a status bar displays "Site settings saved" on the left and a "Show Progress" link with a progress indicator on the right.

License | Connection | Report Information | Site Setup | **Admin Portal Account** | Email Setup | Finish

You will need at least one admin login to access the website and administer new users.

Enter email address for admin account login

Email Setup

SiteCount uses an email account to send out Notifications, distribute generated reports, and email alerts.

The following screen allows you to enter your preferred email account that you want to use to send the SiteCount emails.

The screenshot shows the 'Traf-Sys Data Setup' dialog box with the 'Email Setup' tab selected. The dialog has a title bar with standard window controls and a tabbed interface with tabs for 'License', 'Connection', 'Report Information', 'Site Setup', 'Admin Portal Account', 'Email Setup', and 'Finish'. The 'Email Setup' tab contains the following fields and controls:

- A text box for 'SMTP Server'.
- A text box for 'SMTP User'.
- A text box for 'SMTP Password'.
- Two checkboxes: 'Requires Authentication' and 'Use SSL or TLS', both currently unchecked.
- A text box for 'Portal Admin E-mail (From address)'.
- A 'Send Test Mail' button.
- A text box for 'Report Mailer Path' containing the path 'C:\Wisicount\Programs\ReportMailer.exe' and a browse button ('...').
- An 'Apply' button.

At the bottom of the dialog, there is a status bar that reads 'User information saved.' and a 'Show Progress' link with a small icon.

Use the **Send Test Mail** button to verify the mail settings.

*Some email accounts require you to use the same **From address** as the **SMTP User**.*

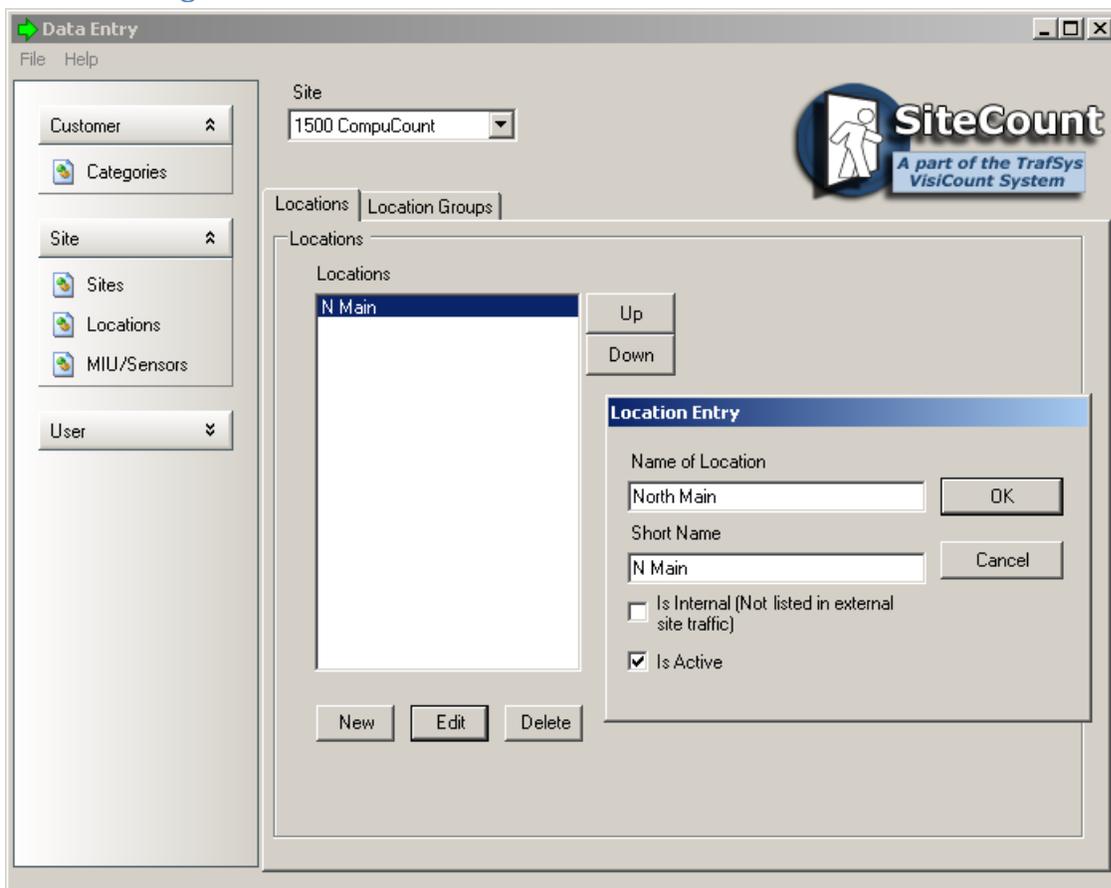

Finish

The final step in installing SiteCount is to start the Windows services. Upon clicking the Start services you will exit the Traf-Sys Data Setup and the installer will complete.

Completion of MIU 1500 / CompuCount setup

Now that the software has been installed you will still require adding the locations and sensors to the system if you are using a MIU 1500 (CompuCount). To do this we need to open the Data Entry application from within the SiteCount entry in your start menu. Use the Admin Portal account created during the installation when prompted.

Adding Locations

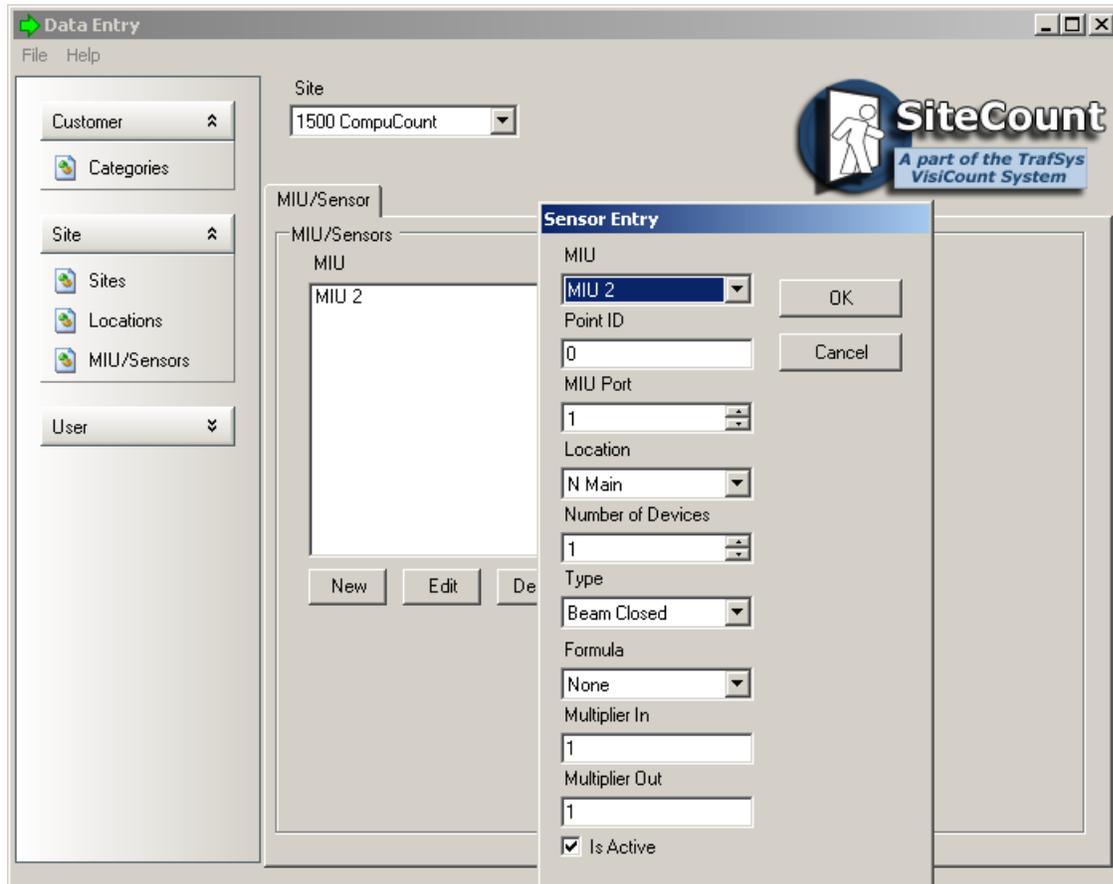

Create a location by selecting **Location** option with the **Site** along the left. Select the corresponding **Site** along the top. Then Create a **New Location** for each position when people counting sensors are installed at your location.

Adding Sensors

Now that we have the locations setup we want to add the sensors that are going to track the counts at each location. To do this select the **MIU / Sensors** option within **Site** along the left. Ensure you are still with in the **Site** located along the top.

Select **New** under the **Sensor** portion of the dialog.

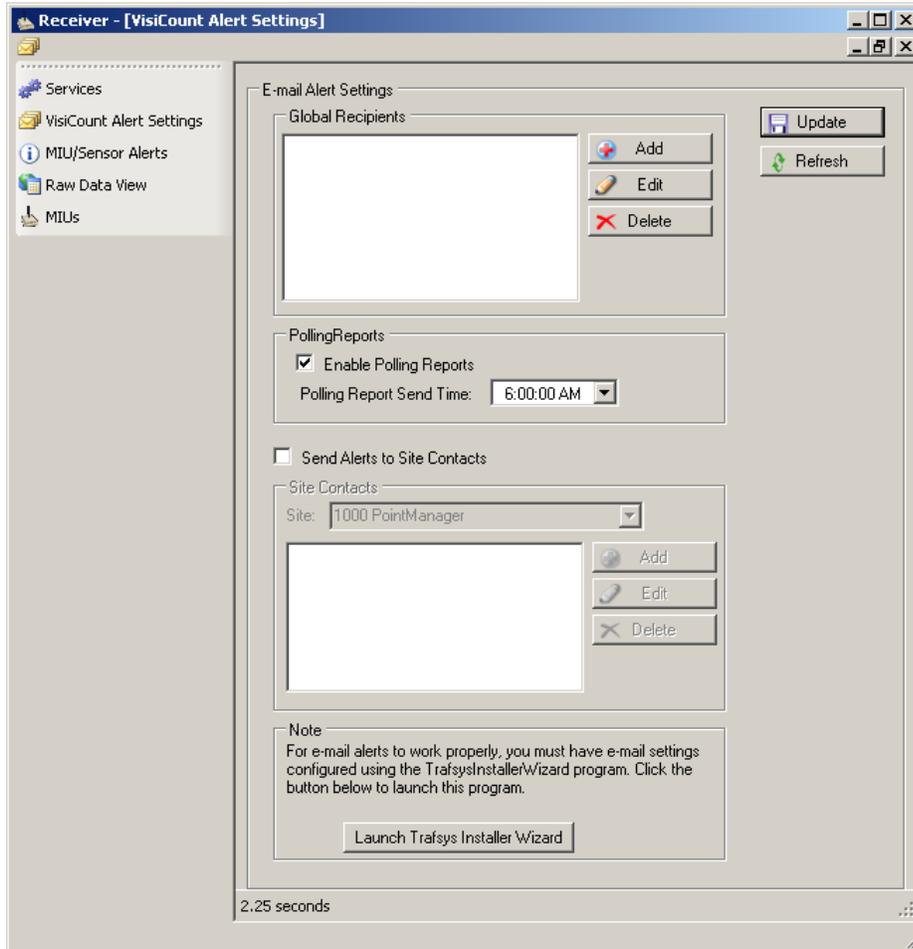

Sensor Entry items are as follow:

- MIU (Generally only one option) Selection of which MIU the Sensor is configured on
- Point ID Unique identifier on each sensor (not required, but cannot be left null)
- MIU Port Number that corresponds to the order that the sensors were added to the MIU
(Refer to [troubleshooting](#) for locating your sensors MIU Port Number)
- Location Previously created name for the position where the sensor is located
- Number of sensors Value will be 1 unless a thermal camera network is on this port

- Type Type of sensor that is setup on this port of your MIU.
(*Non Directional Wireless Beams us Type **Beam Closed***)
- Formula Used to alter the sensors counts to shape them as desired
- Multiplier IN / Out Values are used when Formula Multiplier is selected

Once all the Locations and Sensors are added to DataEntry and related the setup of your MIU-1500 (CompuCount) is complete. Complete this procedure for each site that has a MIU-1500 installed.

Configuring Email alerts

At This point your SiteCount and hardware should be installed and functioning properly. The next step we will setup the Email Alerts to ensure that if an issue comes up it can be addressed as soon as possible. To do this, we will open the Receiver Application from the start menu.

Select the VisiCount Alert Settings in the left hand side.

You can add contacts responsible for all sites up top or add site specific contacts below.

Polling Report

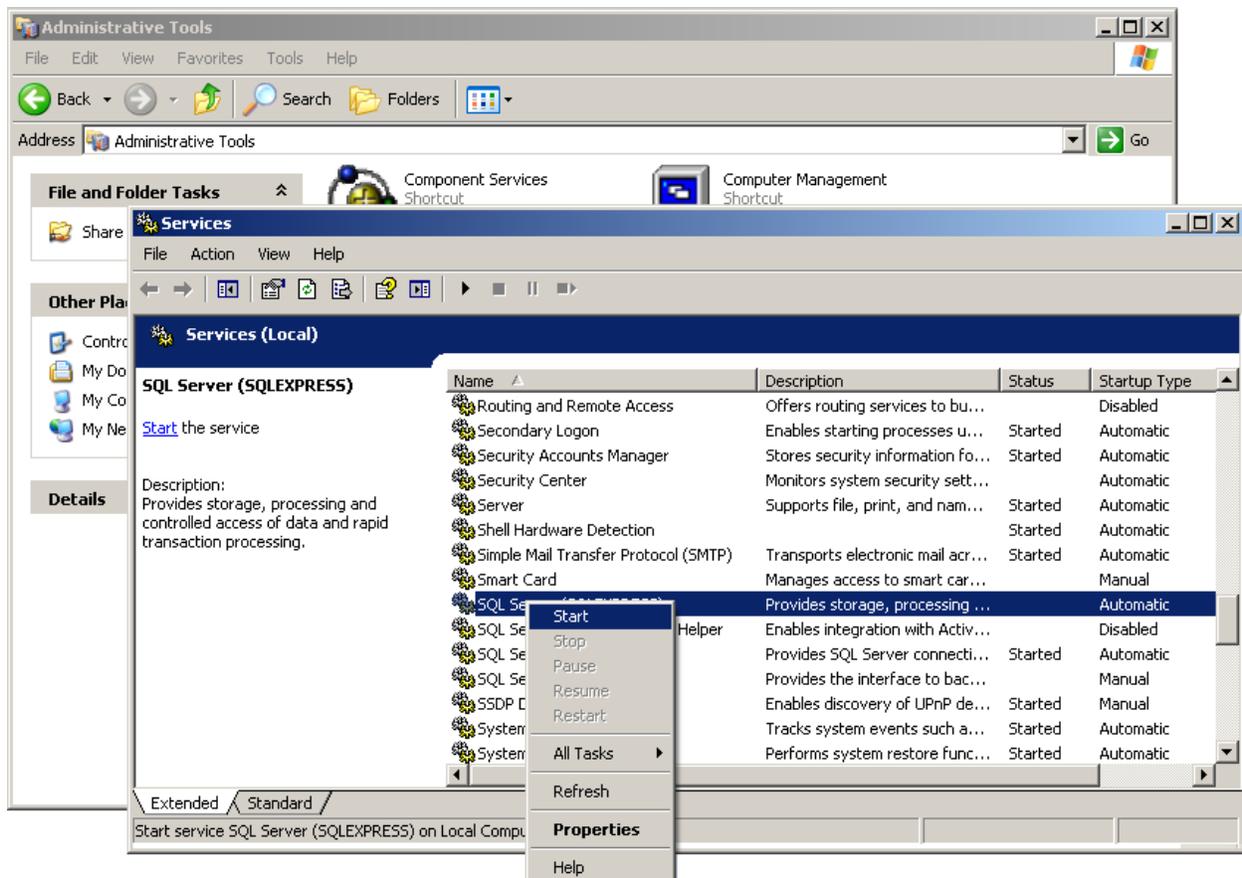

The Polling Report can be enabled to send an overview and status for all Sites that are setup for the system. All that is required is to select the checkbox and select the time you wish to receive the previous days polling report.

Troubleshooting

Here are some solutions to common issues when installing SiteCount.

My Install of the SiteCount Database did not proceed successfully.

- When using the SQL Server Login, ensure that you have entered the correct Username and Password
- When using Integrated Security, ensure that your user has administrative rights
- Ensure that the database service is running
Located at **Control Panel** → **Administrative Tools** → **Services**
- Ensure that the SQL server is configured to Mixed Mode Authentication

When setting up a site, The connection to the MIU Failed.

- Ensure the MIU is online
- Ensure that the IP is correct and accessibility.
(A MIU can be verified by accessing its IP in a web browser)

When adding a sensor I do not know what port the sensor is on.

- Access the MIU-1000 / MIU-1500 via a web browser with its IP address
 - The top most sensor will be configured to port #1. Additional sensors are sequential going down the list.
- If you do not see any sensors when accessing the device it will need configured. For configuring your device refer to: <http://www.trafsys.com/support/knowledge-base/manuals/data-controllers.aspx>
